# Small Group Discussion #3

# Scenario

---

- A 5 year old boy returns to the pediatric dental clinic with his mother 4 months after his initial comprehensive examination complaining of pain on the upper right quadrant.
- The patient had not followed up with the treatment plan that was provided at the time of the comprehensive examination.

# Question #1

---

- What information needs to be obtained from the patient prior to doing the clinical examination?

# Clinical Presentation

---

- The objective findings indicate extraoral right side facial cellulitis. Intraoral buccal vestibular space swelling adjacent to tooth #B

# Clinical Presentation

# Question #2

---

- Please diagnose this condition.

# Question #3

---

- Are radiographs indicated?

# Question #4

---

- Keeping in mind the patient's non-compliance with dental appointments, would you have treatment planned this case any differently after the initial comprehensive evaluation? If so, what?

# Question #5

---

- How should this patient be managed in the future based on their caries risk assessment?
